#### 4/13

#### 3.2 Rated Voltage

Code	0J
Voltage	6.3V

### 3.3 Capacitance

These code are shown by three figures, the 1st and the second figure show the significant digit of the nominal capacitance, and the third figure shows the number of "0" following the significant digit.

Code	Capacitance
227	220µF

#### 3.4 Capacitance Tolerance

Code	Tolerance
М	-20%~+20%

#### 3.5 Packing

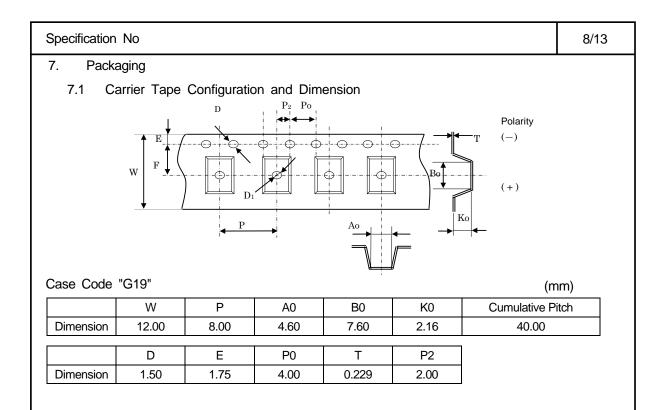

Code	Specification
TR	Tape & Reel

		1	1	L		

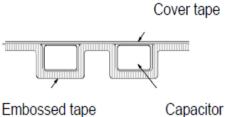

The measurement condition in No.2 to 4 applies to No.8 to 12.

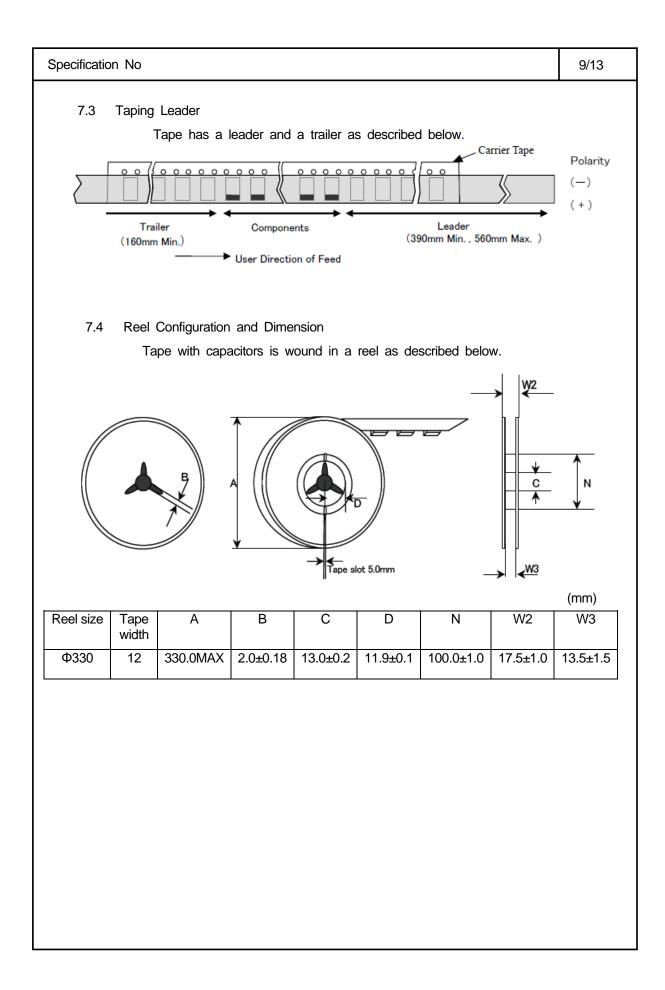

#### 7.2 Tape Packaging

Capacitors will be inserted in embossed carrier tape that will be sealed with cover tape as described below.

No more than half of a sprocket hole will be covered by cover tape.

Specification No 10/13 Caution for Use 8. Caution 8.1 Limitation of the use Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property. ①Aircraft equipment ②Aerospace equipment ③Undersea equipment (4) Power plant control equipment (5) Medical equipment (6) Transportation equipment (vehicles, trains, ships, etc.) (7)Traffic signal equipment ⑧Disaster prevention / crime prevention equipment <a>D</a> Data-processing equipment <a>D</a> Application of similar complexity and / or reliability requirements to the applications listed in the above. Caution 8.2 Storage Condition <1>Term of warranty for this product is two years after packaging in a moisture-proof bag, under the conditions below with sealed packaging. Recommended storage environment: Room temperature: 5-30 degree Humidity: no more than 60%RH <2>Polymer aluminum electrolytic capacitors should be stored in a dry atmosphere, avoiding direct sunlight and condensation. If capacitors are kept at a higher humidity, the following problems may occur: ①Leakage current will increase at the beginning of use and damage the circuit. 2 Moisture absorbed in a resin will evaporate and expand with heat of mounting and damage the mold resin. <3>Please confirm a dry state with a humidity indicator card after open immediately. If 20% indication was in a pink state after opened, it is recommended to bake under the conditions below as countermeasures against the problems ① and ② in <2> above respectively.

Specification No		11/13				
<4>The capacitors should be kept dry using desiccators or any other methods						
after unsealing the moisture-proof packaging. If more than two weeks has passed						
under the recommended storage environment specified above after unsealing the						
packaging, it is recommended to apply voltage and to bake under the conditions below,						
as countermeasures against the problems $①$ and $②$ in <2> above respectively.						
①Recommended voltage	ge conditions:					
	Applied voltage: rated voltage					
	Time: 30 minutes					
	Temperature: room temperature					
	Current limiting resistance: $1000\Omega$ (series connection	on)				
2 Recommended b	aking conditions:					
	Temperature: 60(+0, -5) degree C					
	Time: 168 hours					
<5	>This product meets MSL-3.					

Specification No

#### Caution

8.3 Cautions for Use

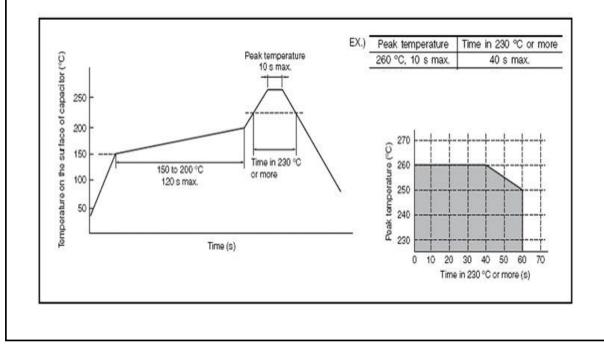

<1>Polarity

Polymer aluminum electrolytic capacitor is polarized. Please not to reverse the polarity when using. If reverse voltage is applied, it may damage the oxide film and the capacitor itself. Please verify the orientation of the capacitor before use in accordance with the drawing of "Markings" in Item 5.

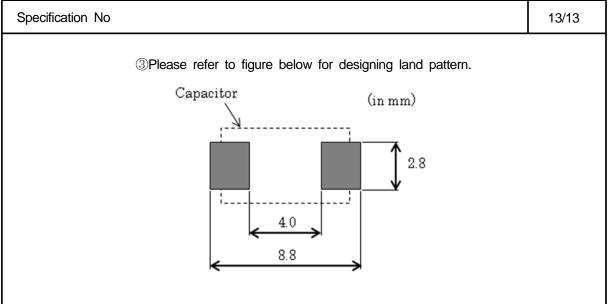

<2>Allowable Ripple Current

Please not to apply ripple current exceeding the allowable value specified in the standards in Item 4.1. If excessive current is applied, it may generate heat and the heat may damage the capacitor. The sum of DC voltage and the peak AC voltage shall not exceed the rated voltage. The sum of the DC voltage and the peak AC voltage shall not allow a voltage reversal.

- <3>Reflow Soldering
  - ①Please not to apply excessive force to the capacitor during insertion as well as after soldering. The excessive force may result in damage to electrode terminals and/or degradation of electrical performance.
  - ②Resistance testing to reflow soldering was conducted in accordance with the reflow profile described in Figure 1. If this profile is adopted, reflow soldering can be repeated no more than two times.

#### <Figure 1.> Our Recommended Reflow Profile

#### <4>Export

This capacitor falls into the cargo specified in section 16 in the attachment List No. 1 to Export Trade Control Ordinance, Foreign Exchange and Foreign Trade Control Law when shipped from Japan.

#### <5>Disposal

Polymer aluminum electrolytic capacitors should be disposed of as industrial waste in accordance with laws.

## 10. Proposal

①When you use, please evaluate in a state mounted by your product.

2Please do not use this product other than the mention contents of this specifications.

3We think that it is not appropriate to mention a contract matter about the business in

specifications, a drawing, other technical documentations.

Therefore, we invalidate it when there is a mention about the range of the responsibility of us such as a guarantee of quality, PL, industrial property, the export control in these technical documentations that your company was made.

Please offer these matters separately in the basic contract document etc...
